

NEW

UMKa310v2

Updated one of the most popular trackers

Compact, reliable and functional devices that allow you to solve even more tasks of satellite monitoring in a variety of conditions

2 analog inputs

One constantly measures the supply voltage, the second can be used for connecting analog sensors.

2 digital/pulse inputs

Additional discrete inputs with pulse counting mode.

Technical characteristics:

- Built-in memory for 10.000 records
- Bluetooth v 4.0 - connection of up to 4 sensors
- MyLogic programming system
- Support for RS-485 interface for connecting FLS
- Built-in ceramic antenna
- Ability to send data to 3 servers simultaneously
- Impact resistant housing. Degree of protection IP 54
- Low power consumption
